

# Palmproject Europe

PALMPROJECT EUROPE

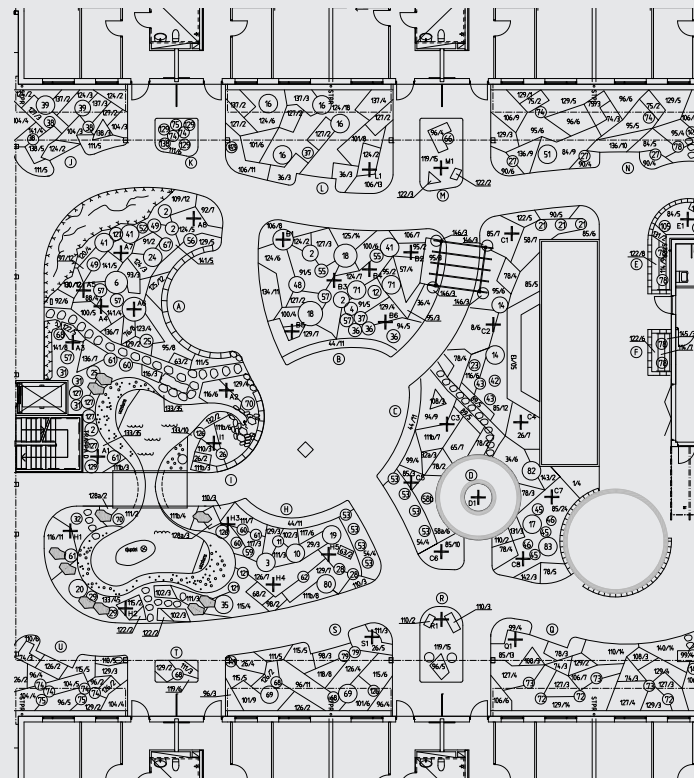

Palmproject Europe  
**designs, project plans, plants and  
manages** atriums and winter  
gardens in the Nordic countries and  
Europe.

We assist with broad knowledge  
and experience after 30 years in  
the industry and can help with all  
the pertinent issues surrounding  
the plants in the winter gardens.

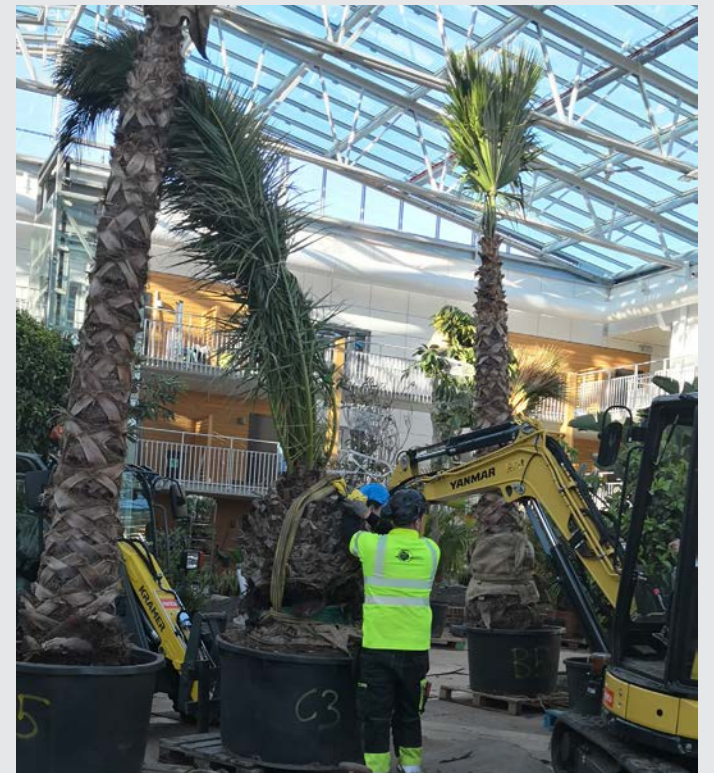

## Design and project planning

We are involved from the start when it comes to development, project planning and design. Together with the customer, architects, landscape architects and contractors, we have the pleasure to participate in the development of these fantastic forms of housing.

## Planting

After the careful selection process and import, the plants are planted by our team. The planting blueprint we have developed is followed by intensive work on machines and shovels to get the plants in place. The planting takes place in last phase in the completion of the property, before it is ready for occupancy.

## Import of thousands of plants

The next step in the process is to select the specimens of plants to be delivered to a newly produced project. As it involves thousands of plants of over a hundred varieties and species, it is a comprehensive work. Everything from small ground covers to hundred-year-old olive trees is selected by us and are marked before being transported to the project when the project is ready.

## Care of plants

No garden will be good without proper care. We are responsible for the ongoing care that includes watering, fertilization, pruning and biological plant protection. Palm-project Europe are working to give the tenant-owners the best possible help in managing their fantastic atrium or winter garden in the long term.

## Consultation from Palmproject Europe

Palmproject Europe are happy to assist with consultation and advice on everything related to atriums or winter gardens.
